

Collected Knowledge & Wisdom on

# jService API

---

## Provides:

156800 trivia questions that are included in many categories, which include math.

## Key Provisioning:

### Pain factor

(0=eazp...5=nightmare): **2**

- No key needed

## Quotas:

- No quota needed
- 

## The Good:

- A huge number of trivia questions with a huge number of categories to choose from. There are a lot of roots that we can access, which include random category, clues, invalid, and category.

## The Bad:

- There are too many categories and some categories only have a few questions. For example, math categories only have around 30 questions in each category.

## The Ugly:

- Raw response is kind of confusing
